KEY TRENDS

Increase in number of births
North Dakota, 2008 to 2018

Economic development had a substantial impact on the number of births in the past decade.

Rapid growth in the oil and gas sector coupled with diverse urban economic development has attracted young people to North Dakota. This increase in the young population has led to an increase in the number of births from 8,931 in 2008 to 10,630 in 2018 (19%).

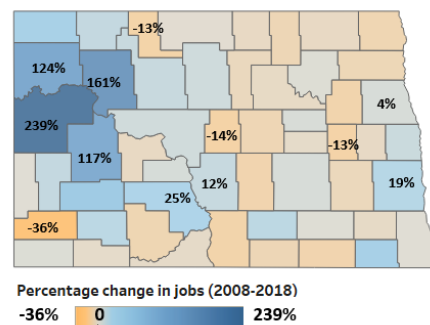

The number of births more than doubled in the four core oil and gas producing counties (721 more births or 138% increase). Metropolitan counties also experienced an increase of 585 births (13%) from 2008 to 2018. This trend has not been consistent throughout the state. While the remainder of the state increased the number of births by 393 (10%) overall, 17 counties experienced a decrease in the number of births from 2008 to 2018. The increase in the number of births has multiple ramifications as communities address current and future demand for child care, youth programs and activities, and schools.

Job creation in North Dakota far outpaced national averages in the past 10 years, but workforce challenges persist.

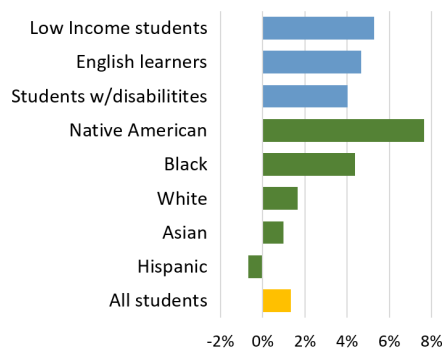

The number of jobs in North Dakota has increased by 19 percent from 2008 to 2018, outpacing national job growth of 8 percent. The number of jobs increased by 117 percent to 239 percent in core oil and gas producing counties and 4 to 25 percent in metropolitan areas. However, 25 rural sparsely populated counties lost jobs during the same time period.

Filling open jobs has been challenging. Unemployment rates statewide remain some of the lowest in the country (2.6 % in 2018) and workforce participation rates (percentage of adults, age 16-64, who are working) remain among the highest (78.8% in 2018). All North Dakota's counties reported more job openings than active résumés (0.27 active résumés per job opening), in January 2020.

Change in jobs, by county
North Dakota, 2008 to 2018

Percentage point change in high school graduation rate
North Dakota, 2014 to 2019

Most historically disadvantaged students showed progress in on-time high school graduation.

Most student groups in North Dakota saw an increase in on-time high school graduation rate in the past five years. Native American students, who have the lowest graduation rate among racial and ethnic groups (72.2%), posted a 7.6 percentage point increase in graduation rate from 2014 to 2019. During the same time period, the graduation rate for black students increased 4.4 percentage points. Among other groups, the graduation rate also increased for low income students, English learners, and students with disabilities (5.3, 4.6, and 4.1 percentage points, respectively).

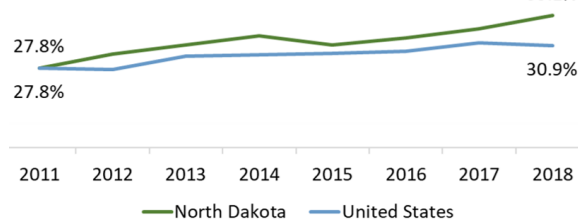

While progress for the most historically disadvantaged student groups is notable, substantial disparity in graduation rates exists between students with a disadvantaged status and their counterparts.

The North Dakota adult obesity rate increased to the 8th highest in the nation.

In 2011, 27.8 percent of North Dakota's adults (age 18 and older) were obese, ranking North Dakota 25th among the 50 states. Seven years later, in 2018, the adult obesity rate rose to 35.1 percent, raising North Dakota's ranking to the 8th highest in the nation.

The North Dakota obesity rate has trended above the national average since 2011.

NORTH DAKOTA BY NUMBERS

79%

Adults (age 16 to 64) who are employed, ranking North Dakota second highest among the 50 states in 2018.

4%

Annual growth rate of North Dakota's inflation-adjusted GDP for 2000-2018, as compared to 2 percent annual growth rate in the U.S., ranking North Dakota first among the 50 states.

20%

Increase in median household income from 2008 to 2018, the largest percentage increase in median household income among the 50 states.

35.2

Median age in North Dakota in 2018, compared to 38.2 in the U.S. In 2018, North Dakota was the only state with a younger median age compared to 2010 (37.0 years in 2010).

8th

Rank of North Dakota among the 50 states (from highest to lowest) for the percentage of voting-eligible population who voted during the midterm election in 2018 (59%).

Number of North Dakota counties with a median age older than 50 years. Overall, North Dakota is getting younger with a statewide median age 35.2.

9

Increase in the number of children (age 0 to 17) from 2010 to 2019, the largest percentage increase among the 50 states.

20%

Adults (age 18 and older) who have ever been told they have a form of depressive disorder. The prevalence of depression for females is twice of that for males (26% and 13%, respectively).

20%

Increase in population of color in North Dakota from 2010 to 2018 as compared to a 16% increase in the U.S., by far the largest increase of any state.

64%

People below the poverty level in North Dakota in 2018, lower than the national rate of 13%. By county, poverty rates range from 7% to 33%.

11%

Data for the 2020 Compass Points are provided by North Dakota Compass, with the most recent data updated in February 2020. Data sources, years, margins of error, and additional notes are available on ndcompass.org.
